

Ambica Agro

About Us

Established in the year 1999, we, Ambica Agro (A parent company of Shayona Biotech Private Limited) initiated our journey as the profound manufacturer of a wide array of Tissue Culture Plants, Apple Plants, Fruits Plant, Forestry Plants and much more. These plants are grown by tissue culture procedures in which we maintain or grow plant cells under sterile conditions using a nutrient culture medium of the known composition. By following this modern technology, we have been able to offer our customers plants, characterized by disease free growth, a fibrous & healthier root system, a bushier branching habit and a higher survival rate.

In order to grow these plants, we have developed our own nursery equipped with advanced and modern machinery. We follow the tissue culture procedure in which we expose plant tissues to a specific regimen of nutrients, hormones, and light under sterile conditions to produce many plants, each a clone of the original mother plant. We have hired experienced professionals who can eventually conduct and regulate the whole procedure with a stringent approach. Backed by our client-centric policies, we are committed to offering a qualitative range of platelets to our valued customers, to increase their productivity and strengthen their market position. Incorporated by professionals having to years of experience in an agro industry and our strict quality-centric parameters, we are offering our product range to our prospects.

Mr. Pragnesh Patel, our leader, and mentor has enabled us to become a brand name in the specified domain, backed by his leadership attributes. He with his directorial skills has managed and regulated the whole organizational structure with convenience and helped us in becoming a reputed firm. We, with our firm belief to offer our customers the best quality products.
